Ranked “Best Of Decade.”

“Graphite shafts are allowing golfers to keep their clubs more stable—that is, to prevent unwanted twisting and turning—throughout the bag. This means more precision on all shots.”

The Stability shaft from Breakthrough Golf Technology.

Breakthrough Golf uses a scientifically advanced multi-material design with new geometries never used in putter shaft design before. A shaft that has the same look, solid feel and weight as traditional steel putter shaft.

Designed to improve any golfers game. The Stability shaft delivers the face squarer at impact for improved accuracy and solid feel and has a lower launch for a predictable roll, resulting in better distance control.

The Most Advanced Putter Shafts Available.

Stability Tour

- Tour preferred.
- New, slim body design.
- Contemporary blackout appearance.
- Softer, responsive feel preferred by better golfers.
- Balances like steel. Allows for more swing weight matching.
- High modulus carbon fiber increases stiffness.

Stability

- 99% of golfers who have Stability prefer it over steel.
- Tighter dispersion over steel for more putts made.
- Replaces 50-year old steel shaft technology.
- Fits virtually every putter ever made regardless of bend profile.
- Easy to install.
- Improved feel without changing your stroke.
