## A New Putter Shaft With A Tour-Preferred Feel And Sleeker Look.

### **STABILITY***TOUR*

The Stability Tour shaft is the result of feedback from the best golfers and coaches in the world and offers the same state-of-the-art performance as the original Stability shaft with a few key differences.

#### **Look**

Streamlined, slim look which tapers to a 13% reduction in the shaft diameter. Stability Tour offers a complete 'blackout' appearance to reduce line of sight distraction.

#### **Balance**

It will balance like a steel shaft which makes it easy to recreate a specific swing weight when re-shafting. Better golfers can replace their steel shaft without changing the balance of the putter, which allows the most discerning players to achieve precise specifications on their equipment.

#### **Feel**

Offers a softer feel. It will match the balance point and flex profile of steel with 30% more carbon fiber for crisp, responsive sound and control preferred by discerning golfers and tour professionals.

The Stability Tour shaft is designed with BGT's patented Advanced Materials Technology, a scientifically proven platform which delivers the face square at impact with a lower launch for predictable roll and better distance control.

Stability Shaft Tour							
Tip Diameter			Butt Diameter	Length	Weight	Flex	Torque
.355	.370	.390	0.6 Inches	37 Inches	102 gm	Ultra Tour Stiff	1°

**99% Of Golfers Prefer Stability Over Steel.**
